

MADiE 1.1.2 Release Notes

The following updates are included in the MADiE 1.1.2 release:

Category	Feature Description
Measure Creation	Waiting spinner has been added to the 'Create Version' modal when versioning a measure to indicate the request is being processed.
Measure Creation	Draft button removed for those measures that cannot be drafted on Measure List page.
Measure Transfer	Updated QICore version in CQL when measures are transferred from MAT from QI-Core version 4.1.0 to QI-Core version 4.1.1.
Export	Updated the Human Readable file to correctly reflect the measure's Experimental status. BONNIEMAT-1431
Export	Updated text that appears in exported file(s) so that "text/cql-identifier" will appear, instead of "text/cql.identifier".
Test Case Execution	Disable Run Test Cases button when there are only invalid Test Cases.
Test Case Creation	MADiE has updated validation error messaging on the Test Case list page, when a population criteria set is removed from a measure.
Resolved Known Issues	Date Added: 3/8/2023 When an array is indicated in the JSON, but the element's cardinality in the model does not support an array (i.e., maximum cardinality of 1), the user should receive a validation error. Currently the file is executed and expected values may be impacted. When an array is not indicated in the JSON, but the element's cardinality requires an array (i.e., maximum cardinality of many), the user should receive a validation error. Currently, the user receives a generic error message, 'e.map is not a Function'. BONNIEMAT-1371
Export	MADiE has been updated to use updated LiquidBase Templates. More information can be found here .
