MADiE 1.1.11 Release Notes

The following updates are included in the MADiE 1.1.11 release:

Category	Feature Description
Test Case Creation	MADiE has been updated to enforce a unique test case group and title combination for all test cases within a measure.
Test Case Creation	**QI-Core Measures**: A new vertical slider has been added on the edit test case screen which allows users to resize their work area on that screen.
Test Case Import	**QI-Core Measures**: MADiE has been updated to support more robust importing of test cases after they have been exported from MADiE. • Test cases imported with a PatientID that does not match an existing test case in the measure will be added as a new test case for that measure, including the expected values from the measure report. • Test cases with a population criteria that does not align with the population criteria in the measure will be imported, but expected values will not be imported for these test cases.
Measure Versioning	Previously, if a user searches for a draft measure and then attempts to version the measure, the "Version" action would not display in the drop down. This issue has been fixed and now a user is able to version a draft measure for which they have searched.
