MADiE 2.0.5 Release Notes

The following updates are included in the MADiE 2.0.5 release:

Category	Feature Description

UI Enhancements	The following updates have been made on the measure list pages:
	• The Select button beside each measure in the list has been replaced with either a View or Edit button (depending on if the user has edit access to the measure).
	• The "Action Center" has been moved to the top of the measure list pages with icons for the following actions added:
	    o Delete
	    o Export
	    o Draft
	    o Version

Test Case Creation	Users now have the ability to search and filter the test cases on their measure by using the Search field or selecting from an available filter option. **Note:** Test case execution is still performed on all test cases, not just on the test cases displaying after performing a search or filtering the test cases. (MADIE-1496)
Test Case Execution	MADiE has been updated to use FQM-Execution Engine 1.5.0. Release notes can be found here.
Resolved Known Issues	CQL validation issues occur when a definition name is resolvable to a quoted identifier, but the definition name is not in quotations. Users may not receive CQL validation errors, however the Population Criteria section won't render, and a blank screen will display. **Work around:** Quotes should be added to all define statement names, even when it is resolvable to a quoted identifier. Stratification definitions are showing up as unused even though they are used in measure. (MADIE-1977) Special characters appearing encoded in the measure observation section of the human readable export. (MADIE-2030) Non-descriptive error when trying to run test cases. (MADIE-2031)
